Physical Security Interoperability Alliance

PLAI Webinar and Online Demo on November 12!

Last month at ASIS, the PSIA announced that our Physical-Logical Access Interoperability (PLAI) specification has achieved a range of functionality-- and now we're ready to give the world a preview of its capabilities!

We're producing a webinar featuring an online demo of PLAI. Our confirmed participants in the demo are:

- **Kastle Systems**
- **STANLEY Security**
- **Tyco Security Products**

Our hosts will be PSIA Chairman Mohammad Soleimani, Executive Vice President and CTO, Kastle Systems; PSIA Vice Chairman Josh Jackson, Director, Global Product Integration, STANLEY Security; and PSIA Executive Director David Bunzel.

PSIA Chairman Mohammad Soleimani,
Executive Vice President and CTO, Kastle Systems

PSIA Vice Chairman Josh Jackson,
Director, Global Product Integration, STANLEY Security

PSIA Executive Director David Bunzel

In addition to demonstrating current functionality of the PLAI spec, we'll cover such business and security benefits as:

- Establishing role-based privileges at an authoritative identity source and propagating this logical privilege data throughout multiple physical access control systems (PACS) from different vendors at a variety of locations.

- Streamlining employee on-boarding with the initial registration of an employee from an authoritative source (IT or HR logical directory) to a PACS.

- Propagating credential information of an employee from one PACS to others, thus supporting enhanced access control at multiple facilities.

- Easy revoking of physical access privileges across multiple PACS.

Find out how the PLAI specification offers a standardized, automatic way to solve one of enterprise security's most stubborn challenges, that of synchronizing logical and physical identities and their access privileges. The PLAI specification is yet another way the PSIA is driving open standards use into access control and throughout the security ecosystem.

Help us spread the word about the PSIA by re-tweeting our tweets, following our blog and forwarding this copy of our newsletter to peers you think would be interested in learning more about how the PSIA specifications are building true plug-and-play interoperability throughout the physical security industry and beyond.

About PSIA
The Physical Security Interoperability Alliance is a global consortium of physical security manufacturers and integrators focused on promoting the interoperability of IP-enabled security devices across every segment of the industry. PSIA supports license-free standards and specifications, which are vetted in an open and collaborative manner to the industry as a whole. Specifications are developed through member and industry participation in five active working groups: IP Video, Video Analytics, Recording and Content Management, Area Control and Systems. To date, more than 2100 industry professionals have downloaded PSIA's specifications.
