New PLAII Agent Featured at ISC West Demo

Six PACS and Biometric Vendors show Interoperability

(FEBRUARY 19, 2019–Santa Clara, CA) The **PSIA** will show continued momentum for its Physical Logical Access Interoperability (PLAI) spec at ISC West 2019. “In past demos we were able to show some exchange of records between PACS systems, but this year we will have six vendors, and demonstrate existing employee identity data sets, which can be passed to other systems in the security environment beyond having just a clean start,” said **David Bunzel**, Executive Director of the

PSIA.

One of the critical components is the introduction of an independent commercial PLAII Agent by **Cruatech** of Dublin, Ireland. This Agent acts as central hub, to allow interchange between disparate PACS and biometric vendors. “The introduction of the Cruatech Agent provides the means to effectively provide solutions to enterprise customers, solving an important problem in the industry—finding a method to have a single trusted source in an enterprise environment,” said **Darren Wieder**, Financial Director of Advanced Solutions for **Convergent Technologies**.

LenelS2 will showcase its new commercial PLAII adapter during the demo. “Our customers have been requesting PLAII and we believe it provides an effective means to support this industry need,” said **John Marchioli**, Product Manager, Software Platforms, LenelS2.

The demo will be held at the Venetian/Sands Expo Center- Sands Meeting Room 403, on April 11, 2019 at 10:00 AM. Seating is limited, so please register [HERE](#) or click button below!
