

The Physical Security Interoperability Alliance (PSIA) Hosts Virtual PSIA Experience at GSX 2022

PLAI and PKOC Specifications Demonstrated

(Santa Clara, CA –September 27, 2022) The Physical Security Interoperability Alliance hosted a successful event, the PSIA Experience, at GSX 2022 in Atlanta. The PSIA Experience featured an interactive demo of physical access control system (PACS) and credential interoperability, offered in real-time on the GSX expo floor.

Security industry professionals were able to experience first-hand the simpler access control environments that the PLAI (Physical Logical Access Interoperability) and PKOC (Public Key Open Credential) specifications provide.

Participants in the PSIA Experience were able to enroll in advance or at the show, receive an access card and badge-in or authenticate at four different stands. Additional partners showing PKOC and biometrics were also at some of these stands, bringing total participants up to 11! Companies participating included **AMAG, Advancis (Cruatech), Convergent, Elatec, Idemia, Johnson Controls, Last Lock, Monitor Dynamics, RealNetworks (SAFR Scan), Sentry Card, and rf IDEAS**. Interoperability, real-time sharing of identity information, and a cloud-based system were all included in the demonstration.

For additional details about the PSIA, please visit www.psialliance.org.

- PSIA was founded in February of 2008 and incorporated in March of 2009.
- The Physical Logical Access Interoperability (PLAI) specification was introduced in 2013.
- The Public Key Open Credential (PKOC) specification was introduced in October of 2021.
- The 11 industry partners participating in the PSIA Experience at GSX 2022 include:

- Advancis (Cruatech)
- AMAG Technology
- Convergent
- Elatec
- Idemia
- JCI
- Last Lock
- Monitor Dynamics
- Real Networks
- rf IDEAS
- Sentry Card

Global Security Exchange (GSX) is a trade event for security professionals. It has taken place for more than 65 years, with this year's event from September 12-14 in Atlanta, Georgia, USA. Meeting the needs of the global security community, ASIS designed an in-person and digital experience for security professionals.
